

Virtually Perfect :: 3D rendering

We'll help you add a whole new dimension to your product development process.

Three Dimensional virtual rendering is one of the fastest, most productive methods of visualizing a new or existing concept. You can easily view any design on any structure from any angle and environment. On-screen design exploration becomes amazingly fluid. "What-if" scenarios take hours, not days. Changes that impact size, shape, graphic, color and even material composition are readily apparent. Just as important, they're cost-effective to achieve.

3D VIRTUAL RENDERING PRICES

Modeling or "wire-framing" (building new shape) • Includes basic scene composition	\$575 one time charge (per shape)
Texturing, skinning or "mapping" of new graphics on to model (with material textures such as metallic, plastic, glass, etc which are applied to that unique shape)	\$350 per item
Scene composition – complex	Charged by project
Hi Res render (useable for Print production applications)	\$250 per item
Animation QuickTime VR (interactive) or QuickTime (play through)	\$950 per item Charged by project
Printing Printing out of the 3D virtual renders with professional mounting is of course possible at an additional cost to be estimated on a job by job basis.	

Digital capture >> model >> texture >> map >> compose >> render >> animate!

Virtual Renderings go wherever your imagination takes you!
